

BACKGROUND INFORMATION

The “INEOS Styrolution – INDAVER” announcement is part of INEOS Styrolution’s ambitious efforts aiming at circularity for styrenics to save valuable resources, recycle styrenic waste and reduce the ecological footprint. The company’s efforts include research projects, collaboration across the value chain and partnerships with customers to optimise solutions concerning sustainability aspects.

Recycling

Together with leading-edge collaboration partners worldwide, INEOS Styrolution creates and invests into recycling concepts for a wide range of styrenic products, like e.g. chemical recycling of polystyrene, taking advantage of the unique properties of the polymer.

Saving valuable resources

INEOS Styrolution is committed to saving our planet’s resources. Our contributions range from developing specialty materials (e.g. ABS or composites, to allow for reducing weight resulting in lower fuel consumption and lower emissions) to renewable feedstock (to allow for reducing the use of fossil feedstock).

Reducing environmental footprint

INEOS Styrolution is committed to resource-efficient operations introducing for example continuous improvements related to recycling of waste and a footprint reduction related to water and waste-water.

INEOS Styrolution is considered a best-in-class company, being awarded an Ecovadis gold rating, based on the company’s sustainability programme and sustainability report, scoring among the top 5% of all suppliers tracked by Ecovadis – and among the top 1% of plastic producers.

About INEOS Styrolution

INEOS Styrolution is the leading global styrenics supplier, with a focus on styrene monomer, polystyrene, ABS Standard and styrenic specialties. With world-class production facilities and more than 85 years of experience, INEOS Styrolution helps its customers succeed by offering the best possible solution, designed to give them a competitive edge in their markets. The company provides styrenic applications for many everyday products across a broad range of industries, including automotive, electronics, household, construction, healthcare, toys/sports/leisure, and packaging. In 2018, sales were at 5.4 billion euros. INEOS Styrolution employs approximately 3,500 people and operates 20 production sites in ten countries.

About Indaver

Indaver – a European player with facilities and operations in Belgium, the Netherlands, Germany and Ireland – manages and treats industrial and household waste in specialist facilities for the industry, waste collectors and public authorities. Valuable raw materials are safely recovered from this waste to replace primary raw materials. By destroying or detoxifying hazardous substances in complex treatment installations, there is no risk of contamination of the food or materials chain. Also the energy that is released during treatment is supplied to third parties. Consequently, Indaver creates value from waste and helps to close the materials loop in a safe, low-carbon and energy-efficient manner. This makes Indaver the ideal partner for helping to realize a sustainable circular economy. In 2018, Indaver realized a turnover of 543 million euros together with its 1700 employees across Europe.
