## **K Fair 2022: About DSM Engineering Materials**

### **Who is DSM Engineering Materials?**

DSM Engineering Materials provides high-performance specialty materials that address key market needs in automotive, electronics, electrics and consumer goods. Besides serving these three main sectors, it also offers sustainable engineering materials to specialized industries including water and food management and health/medical. Its world-class product brands including Stanyl<sup>®</sup>, Fortii<sup>®</sup>, EcoPaXX<sup>®</sup>, Akulon<sup>®</sup>, Novamid<sup>®</sup>, Arnite<sup>®</sup>, Arnitel<sup>®</sup> and Xytron<sup>®</sup> help push the boundaries of performance across a wide range of applications and enable key sustainable living trends such as the shift to electric mobility, connectivity, and renewable energy. DSM's Engineering Materials business comprises polyamides (PA6, PA66, PA666) as well as various specialty materials (PA46, PA4T, PA410, TPC, PET, PBT as well as PPS) and has ~ 2,000 employees at 9 production and 7 research sites in all relevant markets worldwide. DSM Engineering Materials is a sustainability frontrunner in the high-performance materials industry. In addition to committing to developing a complete alternative portfolio of bio- and recycled-based alternatives by 2030, it has accelerated its carbon footprint reduction ambitions recently.
